

FORMFIT® WRIST SUPPORT

Lightweight and lycra lined for protecting the wrist

Following a sprain the stability of the wrist can be compromised and be weaker which can in turn increase the likelihood of a subsequent injury occurring which is why immobilisation is often recommended.

The Formfit® Wrist Support is constructed from a lightweight and durable fabric with a soft lycra lined interior for superior comfort and fit. A removable and mouldable aluminium palmar stay enables the brace to be customised to contour the shape of the wrist and hand. The support offers a simplified fitting through the use of three velcro contact closure straps. The Formfit Wrist Support can be used to treat a variety of sports injuries including tendonitis wrist and a sprained wrist, by offering structural support to the affected areas. This in turn can provide pain relief to the wearer and enhance their rehabilitation and help them to remain active.

- Patented Formfit 3-dimensional moulding technology allows us to vary padding thickness in strategic locations for superior comfort and fit
- Extremely breathable lycra lined interior
- Lightweight durable fabric construction
- Contoured along distal palmar crease to allow for 90° M.P. flexion
- Precisely sculpted narrow web space prevents pinching
- V-notch at fifth M.P. to allow for palmar spread
- Removable/adjustable palmar stay
- Easy-to-use contact closure straps
