

PSB Patella Tendon Strap

The stiffened elements in the PSB Patella Brace apply pressure to the knee tendon and against the lower edge of the kneecap. The tendon is relieved and pain alleviated. The patella brace is easy to apply around the lower leg.

Indication

A PSB Patella brace is particularly suited for overuse injuries around the kneecap. The patella brace is perfect for use with Osgood Schlatters, Patellar Tendonitis (Jumper's knee), Chondromalacia Patella and Runner's knee. The brace is also good for general anterior knee pain around the kneecap.
