

The Serola Sacroiliac Belt is ideal for most hip and low back pain, maternity, pelvis instability, sacroiliac syndrome and acute lower back pain and is regarded as one of the best belts on the market.

The SEROLA SACROILIAC BELT gives day-long comfort with specific support for most low back and sacro-iliac dysfunction, and excellent support for hypermobility, SPD and coxofemoral instability. The Serola Belt comes complete with directions of use on how to wear and position the belt. It is not intended as a cure, but as a day-long helping hand in a treatment programme for most types of back pain.

Designed as an effective and comfortable support for pre/post partum hypermobility and symphysis pubis dysfunction (SPD) it is equally helpful for acquired hypermobility/instability whether occupational (e.g. dancers, gymnasts), post-traumatic, degenerative or compensatory.
